Attachments: BriefingMemo_10-7-20.docx

Anne- This is the last hot issue I can find in my e-mail for CRW. Do you have a more recent one since October 2020? Not sure if have done one or not.

Thanks.

Hi Steve. Couple paragraphs is fine.

THanks.

Hi Stacie, Carol, Mike, and Danielle,

Could you provide me updates for your respective sites/issues **by noon Wednesday, 10/7?** These updates will be included in the monthly paper for Cos. For each site, the update should be concise and ideally no more than a paragraph, or two if absolutely necessary. Below is the list of sites/issues and the last update we used, if available. Thanks. Please give me a buzz if you have questions.

Nonresponsive based on revised scope

Last provided in August 2020 paper –

- **Capital Region Water (CRW):** On August 23, 2020, EPA met virtually with CRW and PADEP to discuss the proposed Long Term Control Plan (LTCP) schedule and projects. The LTCP, originally due April 1, 2018, has not yet been approved despite lengthy discussions and analyses during meetings and conference calls with the parties. CRW is alleging that after 30 years of neglect its

wastewater system was so dilapidated that it will take them 47-years to meet the CSO presumptive approach of 85% capture. During the call the parties addressed the following: the state of CRW's assets; CRW's failure to reach 85% capture in their proposed LTCP; CRW's affordability analysis; and their proposed adaptive management process. CRW's current LTCP approach is a decentralized green/grey control strategy that manages CSOs, unauthorized releases, MS4 discharges, and other sources of water quality impairment. CRW wants to use an adaptive management approach that will allow flexibility and periodic program assessments throughout the implementation period.
